Subject: Notes from call with Wilma Subra

David, the call with Wilma Subra went well. Wilma did not focus heavily on Lake Charles and wanted to talk more about Denka and Colfax. Fran led the discussion and went over data (air toxics and PM2.5) with her. The call ended with a few follow up items we will do for Wilma. Please let us know if you have any questions.

NOTES:

Fran went over the letter Wilma sent to David Gray (December 2020). Wilma indicated that different entities are trying to influence or market-test services in the community.

Fran discussed the data from the 2 monitors Wilma raised in her letter and let her know about the newest facility adjacent to the Lighthouse Ln. monitor.

Fran also explained the PM2.5 monitors in the area, noting that Vinton is the primary NAAQS monitor and informed her the Westlake monitor for PM2.5 is a non-NAAQS monitor operated by LDEQ.

Fran noted the existence of the new air toxics monitor which is being operated by the Lake Area Industry Alliance at the NW side of SASOL's facility.

Fran noted that we are monitoring the air toxics emission reporting trends in the area, and based on emissions reporting from SASOL, that EtO emissions have trended down roughly 75% since 2014.

Wilma indicated she was monitoring those types of trends as well.

FOLLOW UP:

1. Wilma asked for exact address of Lake Area Industry Alliance monitor location. We will try to get as exact address as possible and whether data is available.
2. Wilma has been monitoring Denka's data. She asked whether EPA was stopping the monitoring in February or whether it was being extended.
We indicated we would get back to her. She also indicated they were evaluating whether to do some type of bio-monitoring project with kids at elementary school nearby.
3. Wilma inquired about Clean Harbor Colfax facility and what is EPA going to do about this facility? We will notify Margaret Osbourne for this item.
